

Tessengerlo Kerley, Inc. Joins National Effort to Promote 4R Nutrient Stewardship Program

Tessengerlo Kerley, Inc. (TKI) through its membership with The Fertilizer Institute (TFI), the national trade association representing the U.S. fertilizer industry, has joined a national effort to promote 4R nutrient stewardship. In March, TFI launched a new website, www.nutrientstewardship.com, to showcase supportive resources and educational tools for the 4R nutrient stewardship concept which promotes the use of the right fertilizer source, at the right rate, right time and in the right place.

TKI has joined the Institute's effort by becoming what is known as a 4R partner.

“As a 4R partner, TKI is offering its support for a science-based, site-specific nutrient management concept that is being embraced by members of the fertilizer industry and agriculture community,” said TFI President Ford B. West.

More specifically, as a 4R partner TKI is gaining visibility for its unique agronomic services and products that support the 4R nutrient stewardship concept through a customized webpage within the partners' section of www.nutrientstewardship.com. Additionally, 4R partnership offers TKI a platform for describing its commitment to environmental stewardship, as well as an opportunity to direct traffic to its own website and facility locations.

“The right time for nutrient stewardship is right now,” said TFI's West. “As agriculture faces the challenges of feeding a growing world population while simultaneously responding to increasing regulatory pressures as they pertain to nutrients in the environment, it's more important now than ever before that the fertilizer industry stand together in order to promote voluntary nutrient management efforts such as the 4R nutrient stewardship concept.”
